

Week 11 Progress Report

A weekly progress report summarizes accomplishments, challenges, and upcoming tasks, promoting transparency and accountability. It outlines work completed, milestones achieved, obstacles faced, and plans for next steps to keep stakeholders informed and aligned with project goals.

Details:

- Name of Student: Sparsh Maske
- PRN: 22070521119
- Name of Industry: Electro Era
- Reporting Week: Mention Dates (23/02/2026 to 27/02/2026)
- Institute Mentor Name: Dr. Pawan Verma
- Industry Mentor Name: Sarang Shastrakar

Overview of a Week:

This week focused on system hardening: event-wise reporting, completed-event management, CSV availability, ID consistency improvements, and low-latency live view rendering with bounding box continuity.

Key Accomplishments:

Event and Report Management Enhancements:

- Added Event Management categories for scheduled, active, and completed events.
- Implemented event-wise report filtering by date plus event name.
- Improved completed-event discoverability and CSV access behavior.

PDF and Reporting Improvements:

- Updated visitor report structure to include first in, last out, duration, and date.
- Adjusted PDF output formatting and ID-oriented labeling.
- Improved event summary layout density to support higher-card grid reporting.

Live View Performance and Bounding Box Rendering:

- Optimized client frame rendering path to reduce lag while keeping backend inference unchanged.
- Stabilized processed-frame rendering strategy to reduce frame breakage.
- Preserved bounding box visibility and backend annotation flow.

Challenges Faced:

- Inconsistent visitor ID progression in some sessions due to unstable matching contexts.
- Snapshot timing differences (first appearance vs last captured frame).
- Balancing rendering smoothness with backend processing cadence.

Plan for Next Week:

- Add configurable performance profile (latency vs detail) for live view.
- Continue identity tracking stability tuning across variable camera conditions.
- Final validation sweep for report and export consistency across events.
